

NESTABLE CATCH BASIN ASSEMBLY WITH REMOVABLE DEBRIS TRAP

ABSTRACT OF THE DISCLOSURE

A catch basin assembly for draining water into an underground drainage conduit through
5 a riser includes a housing having an open top and a bottom including an outlet section configured
for connection to the riser. A debris trap is removably installed in the housing so as to capture
and retain particulate debris from water flowing into the housing through the top thereof, the
debris trap having an apertured portion that allows water to flow from the debris trap to the outlet
section. The housing has a tapered configuration, whereby two or more housings, with the debris
10 traps removed therefrom, can be stacked in a nesting relationship.
